

## t-ceramics Advanced Technical Ceramics

### **ZIRCON (Zirconia Silicate) CRUCIBLES** **Max. Continuous Usable Temperature 1550 °C**

#### **Description.**

---

Zirconium Silicate ( $\text{ZrSiO}_4$ ) or Zircon has unique and outstanding properties as a refractory material. It has no definite melting point and dissociation into zirconia and silica begins at 1550°C with little physical change apparent until 1700°C. Its lack of crystalline inversion give it a higher thermal endurance than other ceramic refractory materials.

The tetragonal Zircon crystals are stable in the range from room temperature to 1550°C, have a favorably low coefficient of thermal expansion and a medium thermal conductivity, all of which contribute to remarkable thermal shock resistance. It is also well known that Polycrystalline materials belonging to the tetragonal crystal structure such as Zircon, exhibit excellent mechanical properties. Zircon t-ceramics crucibles have high hardness value, and high abrasion (wear) resistance.

t-ceramics Zircon crucibles can be used up to 1700°C, although the silicate dissociation at this temperature is high and may eventually cause disruption of the ware.

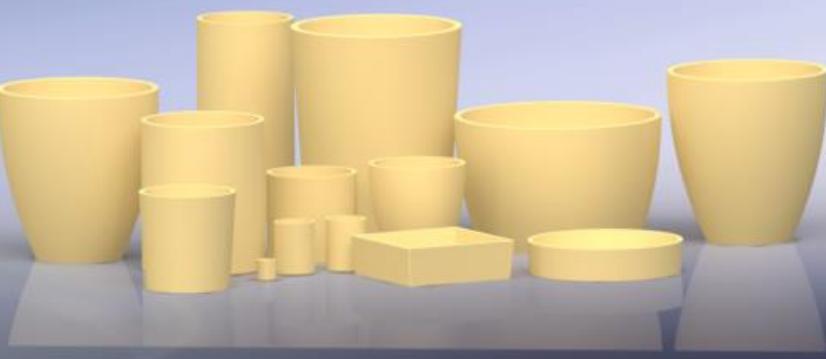

Generally Zircon crucibles have excellent thermal shock resistant, are remarkably hard and wear resistant, can withstand extremely corrosive environments and have severely lower cost compared to alternative refractories. A notable property of Zircon is also the low thermal conductivity making it a material with high insulation value.

Thermansys is producing a broad range of analytical grade, dense Zircon crucibles in various sizes and forms. Custom solutions available upon request.

#### **Applications.**

---

Analytical applications, metals melting, ceramic powders heat treatment, material acid treatment. Zirconia crucibles are ideal for the melting or sintering of precious metals and super-alloys. One of the major uses of Zircon crucibles is in the glass making laboratory. When glassy or siliceous slags are present in your melt t-ceramics Zircon crucible is the solution. Zircon crucibles are often used for melting platinum-group alloys. Their strength and resistance to high temperature makes them right for those special “dirty refining” applications. Zircon crucibles are also suitable for metal melting and casting since the cast metal does not stick to the crucible even at high temperature. Zircon is notable in being unwetted by molten Aluminum.

**Available shapes**

- Dishes (Round Shallow)
- Conical (Tapered Wall)
- Classic Form
- Cylindrical
- Rectangular
- Lids
- Custom Shapes

## Chemical Composition.

• ZrO <sub>2</sub> + HfO <sub>2</sub> % wt.	
<i>HfO<sub>2</sub> is always present in quantities ranging from 1 to 4%.</i>	Min. 61.8
• SiO <sub>2</sub> % wt.	Max. 36.6
• Fe <sub>2</sub> O <sub>3</sub> % wt.	Max. 0.11
• TiO <sub>2</sub> % wt.	Max. 0.14
• Al <sub>2</sub> O <sub>3</sub> % wt.	Max. 0.60

## Properties.

• Max. Operating Temperature, °C .....	1550 -1700	• Dielectric Strength, AC-KV/mm.....	-
• Open Porosity, % vol. ....	<0.1	• Dielectric Constant, 1 MHz.....	-
• Density, gr/cm <sup>3</sup> .....	4.5	• Compressive Strength, MPa.....	-
• Color.....	White-brown	• Flexural Strength, MPa.....	-
• Thermal Conductivity at 20°C, W/mK.....	5-6	• Elastic Modulus, GPa.....	-
• Coefficient of Thermal Expansion, 10 <sup>-6</sup> /°C...	4.0	• Hardness, kg/mm <sup>2</sup> .....	>1400

**NOTE:** The values listed on properties table above are intended to illustrate typical material properties. Property values vary with size, and shape of part. The material properties values contained herein should not construed as absolute or engineering data and does not constitute a representation or warranty for which Thermansys assumes legal responsibility.

## Heating and Cooling Suggestions.

t-ceramics Zircon crucibles are highly resistant to thermal shock.

There are no special precautions recommended for heat up or cool down for the whole usable temperature range of the material. A maximum heating rate of 15°C per minute is recommended while cool down rates as high as 25°C per minute have been tested without cracks.

## Atmosphere - Chemical Compatibility - Corrosion.

t-ceramics Zircon crucibles can be used at high temperature under oxidizing (air), reduced, or inert (Nitrogen, Argon) conditions with no restriction. Zircon is unwetted by molten aluminum, and it withstands molten platinum, platinum-rhodium alloys, copper, copper alloys, some enamel frits, and all acid slags. It is also reported to resist the action of metaphosphates, sodium chloride, sodium sulfate, zinc chloride, and potassium chloride at temperatures several hundred degrees above the various melting points. However, zircon crucibles are not recommended for melting strongly basic materials. Zircon crucibles have very good chemical resistance against diluted or concentrated Acids. Zircon is insoluble in water. The almost zero porosity and excellent smoothness of Thermansys t-ceramics crucibles surface prevents chemical attack. Chemical erosion of ceramic materials is not easy to be measured and determined in a way that will lead to accurate and represented scientific data for all shapes and sizes.

## Health and Safety.

Our ceramic materials, as it is delivered, do not contain substances dangerous to health, or create them during use. They are produced using natural inert raw materials. Any organic binder or other substances used during manufacturing are burned through production firing. Thermansys however cannot guarantee that ceramic crucibles exposed to conditions that could produce residual material or create material transformations retain its health and safety properties upon reuse.

The product at its final delivery form is fully dense and do not produce dust during normal handling and operation. However, if the customer desire to proceed with further product processes like cutting or drilling inert dust might be created. Workers therefor should be provided with suitable dust protection equipment.

## Standard Crucible Delivery Forms and Dimensions Tables.

Tables below are listing dimensions and capacity data for all Zircon crucibles standard shapes and sizes that are available from Thermansys. All data quoted are nominal values. Dimensional tolerances in the order of  $\pm 3\%$  are apply to all our products.

Special shape or size of Zircon ceramics are available upon request. Thermansys can provide a detailed quote even for low volume order. Please send as a detailed drawing of the desired product and we will provide you with a quote.

### Conical Form

**t-ceramics** Zircon Conical crucibles are available in three forms:

- Tall Form with *Top I.D.  $\cong 0.6 \times$  Internal Height*
- Balanced Form with *Top I.D.  $\cong$  Internal Height*
- Short Form with *Top I.D.  $\cong 2 \times$  Internal Height*

Custom sizes available upon request

## Rectangular Form

t-ceramics Zircon rectangular crucibles are available in two forms:

- Square Form with *Length.*  $\cong$  *Width*
- Oblong Form with *Length.*  $\cong$   $1.5 \times$  *Width*

Custom sizes available upon request

### Rectangular Square Form

## Lids

**t-ceramics** Zircon Lids are available for Conical, Cylindrical and Classic Form Crucibles.

Match the Crucible's Top I.D. value with Lid Fit Diameter.

For example: Lid with Part No. **CZRC-LD-C70** having Fit diameter 70mm is suitable for use with crucibles with I.D. 70mm, e.g. **CZRC-CY-T 449**

Custom sizes available upon request

### **Lids (For Conical, Cylindrical and Classic Form Crucibles)**

<b>Fit Diameter (mm)</b>	<b>Outside Diameter (mm)</b>	<b>Height Int. (mm)</b>	<b>Part No.</b>	<b>Price (Euro)</b>
